

1.1.1 Sort book study

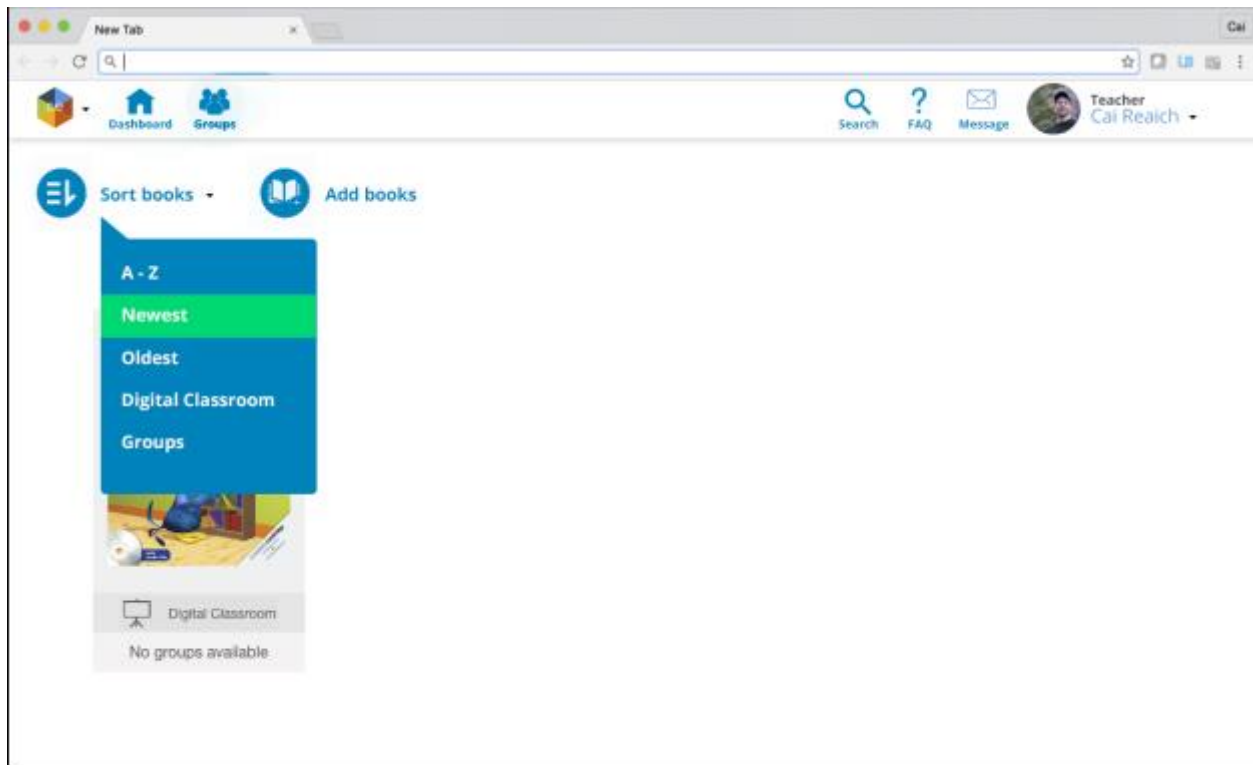

Date updated: November 28, 2016

UXD Intuition

The button looks disabled and I am getting the feeling of by clicking this will open a new screen. So there is a small doubt to click it.

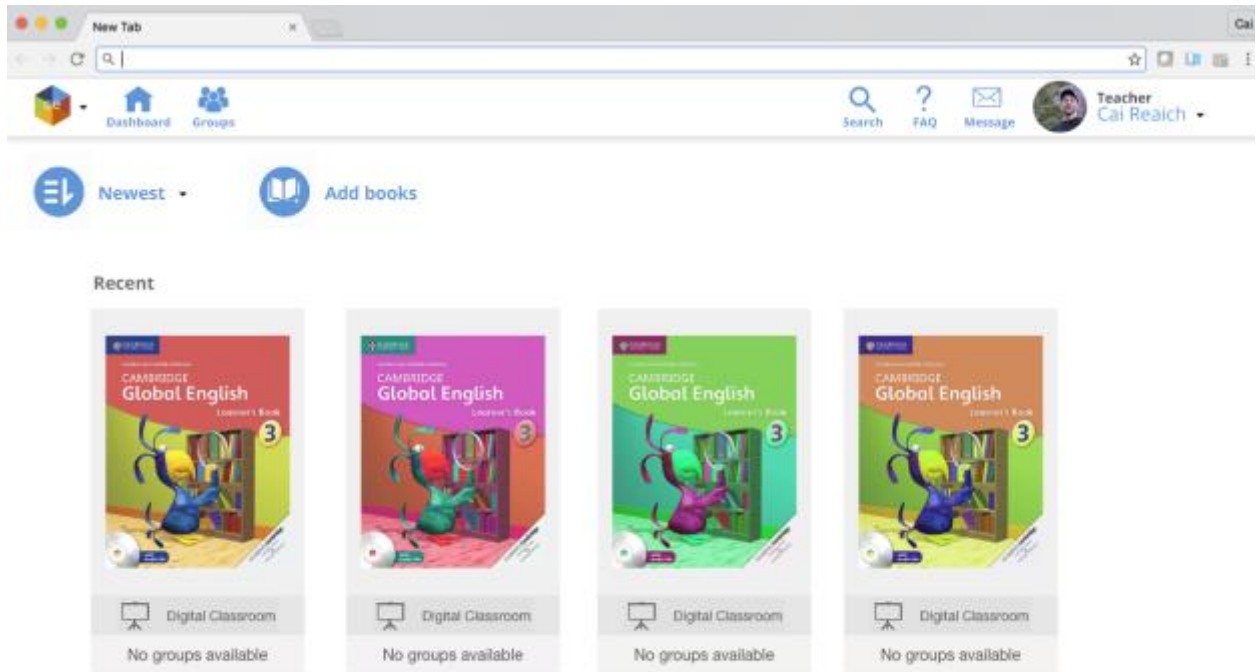

Possible solution

Let's add a caret beside the sortbooks button so that there is expectation that there is a dropdown only. This will be activated by hovering it. We also change the color to Main color (refer to style manual) Using blue is activating the cognitive mind that this element can be interacted with.

The Sort book label will be changed to what is selected, to signify that there is an order activated and they shouldn't panic if they couldn't see their book.
